

G.17 Ursodeoxycholic acid

Review question: What is the effectiveness of ursodeoxycholic acid for preventing liver disease progression in people with cystic fibrosis?

<p>Full citation O'Brien, S., Fitzgerald, M. X., Hegarty, J. E., A controlled trial of ursodeoxycholic acid treatment in cystic fibrosis-related liver disease, European Journal of Gastroenterology and Hepatology, 4, 857-863, 1992 Ref Id 340385 Country/ies where the study was carried out Ireland Study type Randomised controlled trial Aim of the study To assess the effect of UDCA on liver function, biliary excretion and nutrition. Study dates</p>	<p>Sample size N = 12 Characteristics All participants had CF related liver disease. Evidence of advanced liver disease was present in 11/12 participants (91.7%) as determined by the presence of portal hypertension and or histological features of CFRLD. None of the participants had experienced any deterioration in liver function or complications of their liver disease during the 6 month trial. Median age in yrs (range): UDCA (n = 6): 17 (12 - 20) Control (n = 6): 17.5 (14 - 25) Gender (M/F): UDCA: 2/4 Control: 4/2</p>	<p>Interventions Intervention UDCA, 20 mg/kg per day Control No additional treatment</p>	<p>Details Patients were evaluated at 3 month intervals with clinical examination, pulmonary function tests, liver biochemistry, serum albumin and prothrombin time and at 6 months with biliary scintigraphy. Setting Adult Cystic Fibrosis Centre Randomisation method 6 patients were randomised to receive UDCA and 6 were randomised to receive no additional treatment. Allocation concealment Sealed envelopes Statistics All data expressed as mean ± SEM. Values before and after treatment compared with Wilcoxon signed ranks tests.</p>	<p>Results Baseline enzyme values (IU/L) AST UDCA: 79.3 ± 11.3 Control: 75.2 ± 23.0 ALT UDCA: 81.2 ± 12.4 Control: 73.5 ± 23.6 GGT UDCA: 129.0 ± 36.2 Control: 133 ± 62.9 After 6 months: AST UDCA: 49.5 ± 7.8; n=6 Control: 50.8 ± 9.2; n=6 ALT UDCA: 49.0 ± 7.3; n=6 Control: 49.2 ± 8.9; n=6 GGT UDCA: 40.0 ± 10.4; n=6 Control: 136.0 ± 83.3; n=6 Mean change of enzymes from baseline (IU/L): AST UDCA: -29.8 Control: -24.4 ALT</p>	<p>The quality of this trial was assessed using the Cochrane risk of bias assessment tool. Random sequence generation: unclear (specific method of randomisation was not reported) Allocation concealment: low risk Blinding of participants and personnel: low risk (both participants and individuals administering the intervention were kept blind to treatment allocation) Blinding of outcome assessment: low risk (outcome assessors were blinded) Incomplete outcome data: low risk (All groups were followed up for an equal length of time, all participants completed the trial) Selective reporting: low risk (The groups were comparable with respect to the availability of outcome data). Other bias: low risk (The groups were comparable at baseline, including all major confounding and prognostic factors. The comparison</p>
